**Hans Rademacher, Otto Toeplitz : Enjoyment of Mathematics: Selections from Mathematics for the Amateur (Princeton Legacy Library)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Enjoyment of Mathematics: Selections from Mathematics for the Amateur (Princeton Legacy Library):

What is so special about the number 30? How many colors are needed to color a map? Do the prime numbers go on forever? Are there more whole numbers than even numbers? These and other mathematical puzzles are explored in this delightful book by two eminent mathematicians. Requiring no more background than plane geometry and elementary algebra, this book leads the reader into some of the most fundamental ideas of mathematics, the ideas that make the subject exciting and interesting. Explaining clearly how each problem has arisen and, in some cases, resolved, Hans Rademacher and Otto Toeplitz's deep curiosity for the subject and their outstanding pedagogical talents shine through. Originally published in 1957. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These paperback editions preserve the original texts of these important books while presenting them in durable paperback editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage

found in the thousands of books published by Princeton University Press since its founding in 1905.

"A thoroughly enjoyable sampler of fascinating mathematical problems and their solutions."--Science  
"Each chapter is a gem of mathematical exposition.... [The book] will not only stretch the imagination of the amateur, but it will also give pleasure to the sophisticated mathematician."--American Mathematical Monthly
