A cinematographer's skill can make or break a film's overall look, and yet cinematographers are legendarily reticent to discuss their craft.New Cinematographers meets this challenge, featuring the the work of six major, young,

contemporary cinematographers whose vision defines the way films look today. Extended studies of each cinematographer's work -- fully illustrated with stills, lighting charts and storyboards -- help show the how each translates their aesthetic vision into the actual filmed work. The book includes a detailed resource section, an annotated bibliography and detailed technical glossary.
